

THE MER-MADE D.E. BAG TRAY

THE SOLUTION TO A MESSY PROBLEM

The MER-MADE D.E. Bag Tray minimizes the handling of the heavy bags and completely eliminates dust and waste. The D.E. bag is pierced on the underside by two stainless steel bag piercers. Water then flows through the piercers creating a spray inside the bag, which flushes the D.E. slurry out of the openings in the bag. Holes in the tray steer the slurry to the exit pipe and ultimately to the filter tank. No dust is generated and there is no waste due to spillage or remaining powder in the bag, since the bag is completely flushed out.
